PROFILE

Graphic designer and video editor with hands-on freelance experience creating brand creatives, logos, posters, thumbnails and edited video for paying clients. Computer Science (B.Tech) graduate who both designs and ships — comfortable owning a brief end-to-end, from concept and visual direction through editing, colour and motion to final delivery and deadline. Also builds front-end web experiences, having delivered several client e-commerce websites now live in production.

EXPERIENCE

Freelance Graphic Designer & Video Editor

2025 – Present

Self-Employed · Client & Independent Work · Amritsar, Punjab

- Designed brand creatives, logos, posters and social-media thumbnails for clients, friends and independent brands, delivering finished assets to client brief and deadline.
- Edited short-form and long-form video including wedding films and gaming content — handling cutting and pacing, transitions, captions, music sync and colour correction.
- Produced end-to-end content for client social pages: concept, creative direction, design, edit and final export in platform-ready formats.
- Founded and grew independent social media pages, running the full content pipeline solo and building a repeatable visual style across posts.

PROJECTS

B Legend USA — *Client E-Commerce Website* LIVE IN PRODUCTION

2026

blegendusa.com · *HTML5, CSS3, JavaScript (ES6+), Responsive Design, Admin Dashboard*

- Designed and built a complete multi-page supplement e-commerce storefront for a US-based client (BeLegend), deployed live in production.
- Built the full storefront and brand UI system — hero and promo sections, product catalog, category and brand pages, product detail views and cart flow — with a bold, cohesive visual identity.
- Implemented a secure admin login and back-office dashboard for managing products, catalogue content and customer orders.
- Delivered a fully responsive, cross-device layout (mobile, tablet, desktop) built from reusable, maintainable components.

iCore Pharma — *Client E-Commerce Website* LIVE IN PRODUCTION

2026

icorepharma.com · *HTML5, CSS3, JavaScript (ES6+), Responsive Design, Admin Dashboard*

- Developed a complete health and pharma supplement e-commerce website for the IronCore Pharma brand, hosted live in production.
- Created the storefront experience — landing sections, product listings, category navigation and product detail pages — with a clean, clinical design language.
- Built an admin login and management dashboard to handle catalogue, content and customer enquiries behind the store.
- Engineered a responsive multi-page architecture with consistent, reusable UI components across every screen.

Muscle Tonik — *Client E-Commerce Website* LIVE IN PRODUCTION

2026

muscletonik.com · *HTML5, CSS3, JavaScript (ES6+), Responsive Design*

- Designed and built a complete multi-page supplement e-commerce storefront for a client — currently hosted live and serving real customers.
- Created the full visual identity and UI system: hero carousel, product cards, category and brand pages, and a consistent premium orange-and-black design language across every screen.
- Developed an interactive plan generator that takes height, weight and fitness goal as input and returns a personalised diet and workout recommendation.
- Engineered a countdown-timer "Deal of the Day" module, plus best-seller, featured-product, customer-review and transformation-story sections with a newsletter capture flow.

- Delivered a fully responsive multi-page architecture (marketplace, categories, brands, offers) tested across mobile, tablet and desktop.

Web Music Player — *Audio Streaming Web App* *2025*

JavaScript (ES6+), HTML5 Audio API, CSS3, GitHub Pages

- Built a responsive audio player using the HTML5 Audio API with play/pause, real-time progress seeking and volume control via custom event listeners.
- Designed a modern interface with CSS Flexbox and media queries, and rendered song details and album art dynamically from JSON data structures.

Car Rental System — *Vehicle Booking Web Application* *2025*

JavaScript (ES6+), HTML5, CSS3, Local Storage, GitHub Pages

- Developed a rental platform with a dynamic inventory catalog filtering vehicles by brand, type and price, plus a booking flow with form validation and cost calculation.
- Used Local Storage to persist booking requests and rental history, simulating backend behaviour across a user session.

Bingo Game Application — *Interactive Web Game* *2025*

JavaScript (ES6+), CSS Grid, Algorithms, GitHub Pages

- Built a browser Bingo game using 2D arrays for board state and a real-time win-detection algorithm validating rows, columns and diagonals on every move.
